

Pryon for Higher Education

Deliver instant, accurate answers to educators, administrators, and students

From department chairs completing grant applications to students registering for next term, everyone in higher education needs instant access to accurate information. But finding this information is far from easy — internal systems are painful to navigate, and information is often sprawled across different websites and repositories.

Finding the right documents or resources is a challenge, but what students, professors, administrators, and community members really need is accurate answers to their questions.

LESS THAN HALF

of answers are readily available to those who need them

Unisphere Research, 2024

Pryon can help deliver accurate answers to questions such as:

How many units do I need to complete for a minor?

Where does the Model UN club meet every week?

What should I do if my MacBook Pro won't start?

What merit scholarships are available for graduate engineering students?

How many units do I need to graduate?

Which residence halls offer dorm-style housing?

How much does a meal plan cost per semester for students who live off campus?

Is the main campus library open to community members?

Why Pryon?

Pryon uses AI to turn vast quantities of critical, fragmented, and ever-changing content into accurate, timely, and verified answers. Pryon's Retrieval-as-a-Service extracts knowledge from trusted content repositories, like handbooks and websites, while mitigating the hallucination and data leakage risks of other AI offerings.

Whether a parent needs admissions information or a student wants to learn more about campus life, Pryon ensures everyone in education spends less time hunting for information and more time doing what matters.

Eliminate the distance between critical information and those who need it most

Colleges and universities can deploy Pryon to increase productivity, improve efficiency, and enrich the educational experience.

With Pryon...

Students get answers about campus housing, course schedules, and extracurricular opportunities

Faculty members uncover important regulations and guidance, such as academic policies and curriculums

Parents get answers about admission requirements, financial aid, and more

Accurate

Precisely ingests multi-modal content, retrieves mission-critical knowledge with 90%+ accuracy, and delivers answers with clear attribution to source documents

Trusted

Protects against data leaks through document-level access controls and does not train AI models on customer data

Enterprise Scale

Scales to millions of pages of content, supports thousands of concurrent users, and includes out-of-the-box connectors to Google Drive, Box, SharePoint, Amazon S3, and more

Rapid Time-to-Value

Offers rapid deployment in as little as two weeks and a no-code interface for updating content
